

# ECOH DOT PROGRAM

The COVID-19 pandemic has re-defined workplace cleaning and disinfection. It's the "new normal". But how will we protect our employees and customers? How will we prevent more interruptions to our business? How will we demonstrate our due diligence? How will we do our part?

ECOH has developed the "ECOH DOT" Program: a systematic, site-specific approach to workplace cleaning through proper Design, Oversight and Testing. Here's how it works:

## DESIGN

### A Detailed Plan

ECOH's Occupational Health Consultants develop a site-specific scope of work; identify the most appropriate disinfectant(s) and application method(s); determine appropriate personal protective equipment (PPE); and recommend experienced and ECOH-trained contractors to complete the tasks.

## OVERSIGHT

### Providing Re-assurance

ECOH's team provides on-site oversight of the cleaning and disinfection operations. We provide our clients with the confidence of knowing the work was completed as planned.

## TESTING

### Where it Counts

ECOH uses direct-reading instrumentation to provide immediate results to confirm and document the effectiveness of disinfection, giving you confidence in your decisions to re-occupy the space.

## A CERTIFICATE

### The ECOH DOT

After disinfection, ECOH provides a report and our seal of approval, a visual message that the space has been professionally cleaned and disinfected. The new normal!

ECOH is an occupational health consulting firm. With 20 years experience in infection control, we are industry leaders. Contact our team today to discuss your specific needs.
